

Electro Pneumatics Course (EP1)

Electro Pneumatics
2 day course

► The Course

This course focuses on electrical, electronics and advanced pneumatic devices, along with the techniques used to control and optimise integrated pneumatic systems and controls.

- Structure of electro pneumatic systems
- Basic electrical theory
- Electrical components
- Directional control valves
- Relays
- Electro pneumatic circuit design
- Safe working principles

All of the courses include a significant practical element and can be adapted to suit specific industry or business requirements.

This course is designed for technical staff involved in the maintenance and management of pneumatic systems and is also ideal for service engineers and sales personnel. We recommend completing the Intro course (BP1) before studying this one.

Course fees are £395 per person. Contact us for pricing of bespoke courses.

Training venues: Cardiff, Plymouth or at your premises

Maximum of 8 people on each course

Courses are run throughout the year.
We can also arrange a bespoke course for your company.
